

Gap-as-absence rescues GOLGA8I FLNC_129527171

Read R = LOC129527171 transcript (2789 bp, truncated copy with alt 3' end exon = node 8) + 2% error.

OLD HMM scoring filters out positions where any copy has a gap, throwing away the diagnostic 271 bp of node 8.

NEW scoring treats gaps as evidence the copy lacks a base at that position. 071 (and others) have ~270 gaps where node 8 should be -> massive negative score -> source 171 wins decisively.
