

GOLGA8I: exon-intron structure of all 7 copies

Gold = shared exon (sequence-similar across ≥ 2 copies). Other colors = copy-specific exons (one color per copy).

VG summary: 19 shared / 12 copy-specific nodes; 10 nodes shared by ALL 7 copies (the backbone). Negative-strand genes flipped to 5'→3'.

Genomic locations: all 7 copies on NC_073240.2 between 23,542,201–31,108,943 bp
