

a Gorilla (testis, OR6737), genome-wide: 88,387 multi-exon RefSeq transcripts with ≥ 1 read; exact intron-chain match by method

Tie fraction: share of reads with a second alignment $\geq 98\%$ of their best score (transcripts reached by ≥ 1 primary alignment)

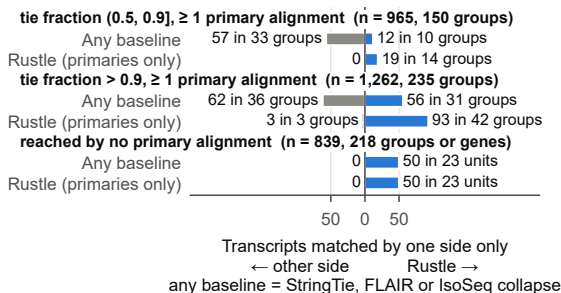

b Human (A119b), genome-wide: 171,027 multi-exon RefSeq transcripts with ≥ 1 read; exact intron-chain match by method

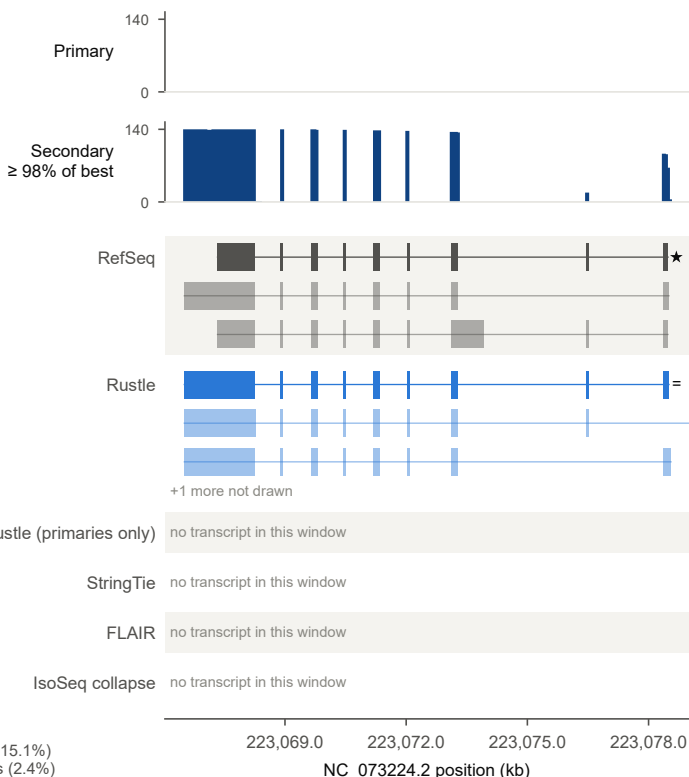

Tie fraction: share of reads with a second alignment $\geq 98\%$ of their best score (transcripts reached by ≥ 1 primary alignment)

c Gorilla (testis, OR6737), genome-wide 3,021 transcripts with tie fraction > 0.5 in 373 read-sharing groups

d Gorilla, NC_073224.2: LOC115933275, reference XM_063702354.1 (star) Depth per 50 bp; = its exact intron chain; faded = another chain

d Human (A119b), genome-wide 5,579 transcripts with tie fraction > 0.5 in 365 read-sharing groups
