

a Records the loop moves, per sample (G0)

G0 counts: not built (tools/rustle_reassemble.sh, then make.py data fig9)

b Simulation: copies recovered, per arm

Simulation: not built (tools/rustle_reassemble.sh, then make.py data fig9)

c Annotation-free intron chains vs the annotation

Intron-chain sensitivity and precision per arm: not built (tools/rustle_reassemble.sh, then make.py data fig9)

d Chains gained minus lost vs the default, by tie fraction

Chains gained / lost by tie fraction: not built (tools/rustle_reassemble.sh, then make.py data fig9)

e Loci in the Liftoff framework (reference, not competitor)

Liftoff loci found, universes U1 (primary reads) and U2 (candidate placements): not built (tools/rustle_reassemble.sh, then make.py data fig9)
